Informed Consent

Chiropractic physicians, medical physicians, osteopathic physicians, and physical therapists that perform manipulation are required by law to obtain your informed consent before starting treatment.

I _____ do hereby give my consent to the performance of conservative noninvasive treatment to the joints and soft tissues. I understand that the procedure may consist of manipulations/adjustments involving movement of the joints and soft tissues. Physiotherapy and exercises may be also used.

Although spinal manipulation/adjustment is considered to be one of the safest, most effective forms of therapy for musculoskeletal problems, I am aware that there are possible risks and complications associated with these procedures as follows:

Soreness: I am aware that like exercise it is common to experience muscle soreness in the first few treatments.

Dizziness: Temporary symptoms like dizziness and nausea can occur but are relatively rare. If these symptoms do occur, please let us know.

Fractures/Joint Injury: I further understand that in isolated cases underlying physical defects, deformities or pathologies like weak bones from osteoporosis may render the patient susceptible to injury. When osteoporosis, degenerative disk, or other abnormality is detected, this office will proceed with caution.

Stroke: Although strokes happen with some frequency in our world, strokes from chiropractic adjustments are rare. I am aware that nerve or brain damage including stroke is reported to occur once in one million to once in ten million treatments. Once in a million is about the same chance as a normal dose of aspirin or Tylenol causing death.

Physiotherapy Burns: Some of the therapies used in this office generate heat and may rarely cause a burn. Despite precautions, if a burn is obtained there will be a temporary increase of pain and possible blistering. This should be reported to the doctor.

Tests have been performed on me to minimize the risk of any complication from treatment and I freely assume these risks.

TREATMENT RESULTS

You should also understand that there are beneficial effects associated with the treatment procedures including decreased pain, improved mobility and function, as well as reduced muscle spasm. However, I appreciate there is no certainty that I will achieve these benefits.

I realize that the practice of medicine, including chiropractic, is not an exact science and I acknowledge that no guarantee has been made to me regarding the outcome of these procedures.

I agree to the performance of these procedures by my doctor and such other person of the doctor's choosing.

ALTERNATIVE TREATMENTS AVAILABLE

Reasonable alternatives to these procedures have been explained to me including home applications of therapy, prescription or over-the-counter medications, exercises and possible surgery.

Medications: Medication can be used to reduce pain or inflammation. I am aware that long-term use or overuse of medication is always a cause for concern. Drugs may mask pathology, produce inadequate or short-term relief; undesirable side effects, physical or psychological dependence, and may have to be continued indefinitely. Some medications may involve serious risks. Please consult with your medical physician regarding pharmaceuticals.

Rest/Exercise: It has been explained to me that simple rest is not likely to reverse pathology, although it may temporarily reduce inflammation and pain. The same is true of ice, heat, or other home therapy. Prolonged bed rest contributes to weakened bones and joint stiffness. Exercises are of value but are not corrective of injured nerve and joint tissues.

Surgery: Surgery may be necessary for joint instability or serious disk rupture. Surgical risks may include unsuccessful outcome, complications, pain, or reaction to anesthesia and prolonged recovery.

Non-treatment: I understand the potential risks of refusing or neglecting care may include increased pain, scar/adhesion formation, restricted motion, possible nerve damage, increased inflammation, and worsening pathology. The aforementioned may complicate treatment making future recovery and rehabilitation more difficult and lengthy.

I have read or have had read to me the above explanation of chiropractic treatment. Any questions I have had regarding these procedures have been answered to my satisfaction PRIOR TO MY SIGNING THIS CONSENT FORM. I have made my decision voluntarily and freely.

To attest to my consent to these procedures, I hereby affix my signature to this authorization for treatment.
